Year 10 Physics

As part of their study of the physics involved in the topic “Road Science”, Year 10 students visit Kartmania where they compete against each other in go-karts. They analyse the motion of the bus journey to the track and the motion of the go-karts on the track. They also consider the features of the go-karts and the track itself which keep them safe. Students thoroughly enjoy this activity for the academic challenges and social opportunities that it offers – and of course the absolute fun factor!
